

Master: master.scss

Landing page / Defaults: _main.scss

Responsive rules: _mediaqueries.scss

Colors: _vars.scss

Mixins: _mixins.scss

All Users (UserComponent.js) => _allusers.scss

- Basic responsive css
- Default avatar if the user does not add their own avatar

Movie Browse (MovieBrowse.js) => _browse.scss

- Rendered inside the js component, not on the main page
- moviebrowse-card inside a div
- Multi row for mobile

Individual movie/tv show/music page => moviePage.scss

- Center alignment for all the main div and sections

Current problem:

- The scss worked fine when I opened the pages, but it didn't not work when I opened them on localhost. This happened with the movie_browse, all_users and individual movie pages. I am not sure if this happen on the other computer

Coming soon:

- User login component (LoginComponent.js) => _login.scss
- Horizontal scroll banner => _scroll.scss for Movie Browse
